

ECOSWEEE

Enhancing collection of small W/EEE and batteries

The primary aim of the LIFE-ECOSWEEE project is to enhance e-waste management strategies across the EU. Through producing a detailed report and accompanying briefings, the project seeks to influence and refine the WEEE legislation and the forthcoming Batteries Regulation. By encapsulating best practices and fostering collaboration via a Stakeholder Platform, the initiative aims for a holistic approach, ensuring the sustainability, scalability, and effectiveness of its outcomes at both national and EU levels. This is all part of a broader vision to address the challenges and implications of e-waste in the European context.
